ABOUT ME

I am a professional in constant evolution, with experience in Social Work and specialization in disability area. My interest in technology and innovation led me to an exciting transition into the world of Web Development.

Currently, I am training in **user interfaces and experience (UX/UI)**, **web accessibility** and in **TDD**.

In my last work experience, I have had the opportunity to work as a Frontend Developer at Kairós Digital Solutions S.L., where I have created reusable **JavaScript** components with **LitElement** and improved the **accessibility** and **performance** of their commercial website. I have also applied tests with **Jest** and **Cypress** and have worked on continuous integration and deployments with **Docker**, among other fundamental tasks. In addition to my experience with the mentioned technologies, I have also worked on several projects using **React** as my main framework and **SASS** for styles. In the past, I have also done projects with **AngularJS** and **jQuery**, so I would have no problem picking it up and updating myself on its latest versions.

My ability to **adapt**, attention to **detail**, **curiosity** and **proactivity** are qualities that I have developed and perfected throughout my career. Additionally, my background in social work has given me a unique and **empathetic** perspective on the importance of technology in society, enhancing my understanding of **community needs** and **problem solving**.

My current goal is to merge my technical skills with my empathy and social perspective to create inclusive and accessible digital solutions. I firmly believe that technology can make a difference in people's lives and I am excited to be part of that change.
