LARA RAMOS POBLET

WEB DEVELOPER

I'm a professional in the social sector in technological transformation. My experience in social work has given me a unique and empathic insight into the importance of technology in society and its impact on people's lives. Besides, among my talents I can highlight my capacity for observation and adaptation, curiosity, proactivity and my high degree of commitment and perseverance in everything I start.

About me:

I'm Lara, a professional in the social sector in technological transformation, looking for a job opportunity as a junior web developer. I recently graduated from the Adalab Web Programming bootcamp, which has provided me with the following skills: HTML, CSS/SASS, JavaScript, React, NodeJS and SQL/SQLite, Agile philosophy and Scrum framework. In addition, I had the opportunity to work on projects as a team, which allowed me to develop my collaborative and problem-solving skills.

My experience in social work can be valuable in web development as it provides effective communication skills (useful for teamwork), understanding of community needs, problem solving skills, and knowledge of privacy and security of data. Also, having specialized in disability I can bring a useful and unique perspective to web development by providing information on the needs of people with disabilities, suggesting solutions for accessibility and understanding the rules and regulations related to web accessibility. This can ensure that the website is accessible and usable by everyone.

Among my talents I can highlight my capacity for observation and adaptation, proactivity, initiative, curiosity, and my high degree of commitment and perseverance in everything I start.

Currently, I'm very motivated to use my programming skills to contribute to projects that have a positive impact on the community and help improve people's lives.
